

PREMIER™ ROCKSHIELD

Heavy-duty armouring offering mechanical protection against backfill for all types of Premier™ pipe coatings

Premier™ Rockshield is a flexible armouring which provides additional mechanical protection for coatings on metal pipelines where they are laid in rocky ground or abrasive backfill.

Its diagonal mesh construction provides flexibility for easy application whilst ensuring maximum protection of the pipe coating against impact or indentation by rocky backfill. The open mesh exposes 70% of the coated pipe surface ensuring uniform passage of electrolyte and cathodic protection current, avoiding any risk of cathodic shielding.

Rockshield also offers environmental benefits; it does not require sub-soil to be removed from site, or for sand/graded backfill to be imported.

FEATURES

- Heavy-duty pipe protection
- Flexible and easy-to-apply
- Allows uniform passage of electrolyte through pipe for good cathodic protection.
